

CENG 382 LAB 10

Now that you have created room tables in your database let's add some rooms to your page.

- Create a New Page. You must create a Form for any name you desire on this page. With this form, you will create and send Rooms in your database.
- Create another page to show these rooms as a table and create necessary links to go through these pages.
- Your pages must be styled with Bootstrap.
- Use any means you have CSS Bootstrap to create a unique style page.

With the Front End created, Now let me explain your tasks.

- You must implement basic CRUD operations for Rooms Table in the database with your application.
 1. You should be able to add rooms to your database with your website.
 2. You should be able to see the list of rooms on another page.
- Use the new branch and multiple commits with clear explanations of them.
- Then, with everything finished, merge the new branch you created this week with the branch you created last week.
 - Checkout to your last week's branch
 - Type "merge TheNameOfTheBranchYouCreatedThisWeek."
 - If there is no conflict, everything is okay. If not, you have to solve that conflict.
